

Honda Pioneer 1000-5 Rear Door Seal Instructions

Tools Needed:

Drill Corded or Cordless

5/16" Drill bit

Step 1. Layout the door seals and the end of the seal that has the first set of holes from the second hole on the edge line that is 4" apart will be the side that is on the front edge of the rear door.

Step 2. Start the seal on the front of the door position it level to the bottom of the latch component (shown in picture to the right). Start drilling the holes just off of the center line as shown in picture below.

Step 3. The next step will repeat until you have the seal to the end of the door follow along the edges of the door and pull on the seal till it is tight along the edge mark where the hole needs to be and drill out and attach the supplied push clip then move to the next hole on the seal. Pictures below should help in reference to the position it should sit on the door.
